IPPE Community Workbook

Preface

The purpose of this workbook is to serve as a guide for you while you are on your rotation. The exercises are specifically tailored to expose and orient you to the practice of pharmacy in a community setting. To gain the most benefit of these exercises, please think about the questions and try to answer them on your own. If you cannot find the answer then ask your preceptor for direction on where to find the answer.

Prior to your start day:

Please complete the following prior to your first day at the site:

Site information:

Name: _____

Location: _____

Phone: (____) _____ - _____

Preceptor information:

Name: _____

Phone: (____) _____ - _____

Email: _____

Preferred method of contact: _____

First day:

When to meet? _____

Where to meet? _____

Where to park? (Any specific parking instructions) _____

What do I need to bring with me? _____

First meeting (Orientation day):

The first meeting with your preceptor is the time where goals and expectations are discussed and the plan to achieve them is prepared. Take the time with your preceptor to fill out the calendar below with general times for attendance, meetings, activities....etc

Objectives:

1. Participate in the preparation and dispensing of medications in a safe and timely manner
2. Assist in screening prescriptions for acceptability, accuracy, completeness and patient safety
3. Participate in reviewing a patient's medication profile to detect medication allergies, correct doses, duplicate medications, and important drug interactions.
4. Explain how the third party payer system can be used to promote cost-effective and timely drug therapy
5. Recognize possible signs / indicators of drug diversion, misuse, and/or abuse, and take appropriate action
6. Demonstrate effective verbal, non-verbal, and written communication skills to patients, caregivers, and preceptors
7. Provide, under direct supervision of preceptor, basic medication counseling to patient or caregiver, regarding self-care, prescription, and non-prescription therapies.
8. Complete a comprehensive medication history
9. Demonstrate ability to retrieve and provide drug information on key assigned concepts (brand/generic name, use, usual dosage, common ADRs, major patient counseling points)
10. Describe and use pharmacy systems and technology that improve patient safety, pharmacy inventory management, drug / product storage, and medication distribution
11. Describe the principles of inventory control, stock arrangement and storage procedures
12. Display familiarity with the process of ordering, receiving, pricing and returning medication products from wholesalers
13. Comply with state and federal legal requirements of pharmacy practice.
14. Maintain confidentiality of patient information
15. Differentiate the roles of pharmacists and technicians in providing community pharmacy services
16. Demonstrate professionalism, ethical and responsible behavior and show concern for patient welfare at all times
17. Interact with other health care professionals in a respectful way that facilitates cooperation and trust
18. Utilize active listening skills, and speak at a level appropriate for the patient's level of understanding
19. Develop and maintain a professional portfolio that would reflect self-assessment

Part 1

(To be completed during your two week focused experience)

Medication Flow Process

Prescriptions exchange many hands from the moment it is dropped off at a pharmacy until the medication is picked up by the patient. However, there are common steps within the medication flow process that ensure safety and efficiency.

Please identify the role each member of the pharmacy team plays and briefly describe their main responsibilities (you don't have to fill out the whole table. If you need more space then, simply, insert more rows)

Team Member	Responsibility
Pharmacy Clerk	Greeting customers, accepting prescription drop offs, customer check-out, arranging OTC products on the shelves.

Please identify the team member(s) involved in each of the following steps and what their primary responsibility is within the step to make sure the process moves forward

Rx Drop off	
Data entry	
Filling	
Verifying	

Dispensing	
-------------------	--

- Does the pharmacy utilize any other steps in the medication flow process? Please identify and describe

3- Please document examples of three interventions (e.g. Drug-drug interaction, allergy) that prevented a medication error from occurring and two insurance claims that were rejected and give an overview of what happened, how was it detected and what follow up was provided.

	What happened	How was it detected	Follow up
Intervention			
Intervention			
Intervention			
Insurance Claim Rejection			

Third party payer system

1) What is a “third party payer”?

2) What is a formulary?

3) How are insurance claims adjudicated/processed at the pharmacy (overview)?

4) What happens if a claim is rejected? When do you call the physician/prescriber?

5) What is Prior Authorization? When and why would one be needed?

6) What is the difference between Medicare and Medicaid? Fill out the table

	Medicare	Medicaid
Who is eligible?		
What is covered?		
Where can I find more information?		

7) You are a new patient on Medicare and are trying to get drug coverage. Go on Medicare website (<http://www.medicare.gov/default.aspx>) and try to figure out which plan works best for you. You are on the following medications:

- Lisinopril 10mg daily
- Simvastatin 10 mg daily
- Aspirin 325mg daily

a. Which plan did you choose?

b. How long did it take you to complete the exercise?

c. How easy or difficult was it to use the website? Pros/Cons?

d. What value can a community pharmacist add to this process?

Pharmacy Law

Please refer to Indiana's Board of Pharmacy Law Compilation to answer the following questions

1) What is the legal definition of the following terms?

a. "Pharmacist Intern" is a person who is:

1) _____

_____ ;

2) _____

_____ ;

3) _____ ; or

4) _____

b. "The practice of pharmacy"

c. "Drug":

1) _____

_____ ;

2) _____

_____ ;

3) _____ ; or

4) _____

d. "Prescription"

e. "practitioner" means any of the following:

1) _____

2) _____

3) _____

4) _____

5) _____

6) _____

7) _____

f. "Patient"

1) _____

2) _____

3) _____

g. "Electronic signature"

h. "Dispensing"

i. "Counseling"

j. "Controlled drugs"

2) A prescription must contain the following information:

- a. _____
- b. _____
- c. _____
- d. _____
- e. _____
- f. _____
- g. _____
- h. _____

3) Each written prescription issued by a practitioner must have two (2) signature lines printed at the bottom of the prescription form, what are those lines?

4) Each electronically transmitted prescription issued by a practitioner must:

- a. _____; and

b. _____

5) A prescription drug may be dispensed only:

a. Upon a _____
_____ or;

b. Upon a _____

c. By _____

6) If a prescription for a drug does not indicate a number of refills, how many times can the prescription be refilled? _____

7) In the sale or dispensing of any prescription drug or narcotic, the pharmacist shall affix to the immediate container in which such prescription drug or narcotic is delivered a label bearing the following information:

a. _____

b. _____

c. _____

d. _____

e. _____

f. _____

g. _____

8) The U.S. federal government has placed controlled drugs into five schedules. What are the required findings by the government for placement of a drug into each schedule?

Schedule I (CI; C-I)

1. _____

2. _____

3. _____

Example: _____

Schedule II (CII; C-II)

1. _____

2. _____

3. _____

Example: _____

Schedule III (CIII; C-III)

1. _____

2. _____

3. _____

Example: _____

Schedule IV (CIV; C-IV)

1. _____

2. _____

3. _____

Example: _____

Schedule V (CV; C-V)

1. _____

2. _____

3. _____

Example _____

9) All controlled substance prescriptions written by licensed Indiana practitioners, must contain the following security features:

1) _____

2) _____

3) _____

4) _____

5) _____

6) _____

7) _____

8) _____

9) _____

10) _____

10) Controlled substances prescriptions issued by individual practitioners in adjoining states to Indiana or other states are considered valid prescriptions if

11) What is INSPECT?

12) Each time a controlled substance is dispensed, the dispenser shall transmit to the INSPECT program the following information:

a. _____

b. _____

c. _____

d. _____

e. _____

f. _____

g. _____

h. _____

- i. _____
- j. _____
- k. _____

The information required to be transmitted under this section must be transmitted not more than _____

13) A certified pharmacy technician may not perform any of the following:

- a. _____

- b. _____

- c. _____
- d. _____
- e. _____
- f. _____

14) Under what circumstances may a faxed CII prescription be accepted?

- a. _____

- b. _____

- ---

c.

- d.

15) Prescription information for legend drugs that are not controlled substances may be transferred at any time during the lifetime of the prescription up to _____, or _____, whichever comes first

16) How many times can prescriptions for legend drugs that are not controlled substances be transferred? _____

17) How many times can a prescription for Schedule III, Schedule IV, and Schedule V controlled substances be transferred? _____

a. Within what time frame? _____

b. What is the exception to this rule?

Over The Counter

Explore the aisles of the pharmacy and fill in the following table

	Brand Name/Generic Name	Active Ingredient (s)	What is the pediatric dose?
Cough suppressant			
Expectorant			
Fever			
Earache			
Pain			
Allergies			
Laxative			
Gas relief			
Heartburn			
Vaginal Yeast infection			
Athlete's foot			

Herbal

Indicated Use

Cranberry	
Garlic	
Ginkgo	
Saw Palmetto	
Echinacea	
Black Cohosh	
Milk Thistle	
Ginseng	
St. Johns Wort	

Part II

(To be completed weekly while at your site)

Introduction

Each week you are on rotation you will have a particular topic of focus and an accompanying exercise to complete. Please make sure you read the exercise a week in advance since some exercises require prep work.

Week 1	IPPE Topic Focus
Jan 15	OTC cough and cold product focus Course Outcome 5

Exercise overview

The goal of this exercise is to become aware of available over-the-counter (OTC) medications commonly used to treat cough and cold symptoms. This exercise will help you develop skills that you can apply routinely when patients request assistance with OTC medications.

On the day of this session you will

- Select one OTC cough and cold product
- Utilize one resource available at the site or electronically through the Manchester University Drug Information Center
- Complete the table below with the assistance of the guidelines provided

Guidelines
<p><i>Description and Pharmacology</i></p> <p>This section should include a description of the compounds including their therapeutic mechanism of action. Important advantages and disadvantages in the pharmacological effects of each drug should be discussed as well</p>
<p><i>Indications</i></p> <p><u>FDA-Approved</u>: List all FDA-approved indications (there may not be any)</p> <p><u>Non-FDA-Approved</u>: List all non-FDA-approved indications supported by evidence</p>
<p><i>Safety and Tolerability</i></p> <p>This section should include information regarding manufacturer-labeled contraindications, warnings, and precautions (including pregnancy and lactation information); additionally, review of safety data from additional tertiary references may be helpful. Adverse event data</p>

should be presented in a manner that emphasizes the most common and most serious adverse events, with suggested strategies to prevent or manage these events if they occur; it is also helpful to present this data as specifically as possible. Potential drug-drug, drug-food, drug-laboratory, and drug-herb interactions should also be presented with suggested management approaches. Information should be presented in a comparative table

Medication Error Potential

Information should be included about potential medication errors that could occur in dosing, medication preparation, medication administration, or concerns with look-alike/ sound-alike names. If potential risks exist, methods for preventing medication errors should be introduced. Use the Institute for Safe Medication Practices and US Food and Drug Administration websites

Dosing and Administration

The recommended doses for specific indications and patient populations (e.g., geriatric, pediatric, obese, renal failure) should be clearly listed. If applicable, a description of dosage titration should be included

Monitoring

Information regarding recommended patient monitoring parameters with suggested time intervals for assessments should be presented. Information regarding therapeutic endpoint (i.e., how long a patient should continue the medication) and a plan for referral for professional treatment should also be provided

Patient Information

Pertinent information you would share with the patient about the medication

Summary

In one paragraph, summarize key data presented in the evaluation (e.g., overview of drug class, indications, safety, and cost). Any important advantages or disadvantages of the product should be stated. Specific reasons why you would recommend this product to a patient and when this product would be most appropriate should be provided

Product Information	
<i>Trade Name(s)</i>	
<i>Generic Name(s)/Active Ingredient(s)</i>	
<i>Manufacturer</i>	
<i>Available Dosage Form(s)/ Strength(s)</i>	
Description and Pharmacology

Week 2	IPPE Topic Focus
Jan 22	OTC Patient Counseling-Shadow (Cough and Cold) Course Outcomes 3 and 5

Exercise overview

The goal of this exercise is to observe a pharmacist counsel a patient on an over-the-counter (OTC) medication commonly used to treat cough and cold symptoms.

On the day of this session, you will

- Inform your preceptor that you need to observe him/her counsel a patient on an OTC product
- Use the check form provided below to document the case and compare the pharmacist's counseling technique with what you learned in class

Description of patient case	
<i>Check all that applies</i>	
<i>The pharmacist.....</i>	
Introduced self and greeted the patient	
Asked appropriate initial question to determine patient's problem	
Gathered PATIENT-related data as needed to assess the problem	
Gathered PROBLEM-related data as needed to assess the problem	
<i>If</i> the patient was CURRENTLY using drug or nondrug therapy for the problem, the pharmacist appropriately assessed and recommended continuation, change, or discontinuation of that therapy	
Gave justification for the recommendation	
Selected and recommended appropriate drug therapy	
Selected and recommended appropriate non-drug therapy	
Appropriately referred the patient or recommends "no therapy needed"	
Gave justification for the plan	
Counseled the patient about how to monitor for efficacy and safety of the recommended treatment	
Counseled the patient about how to monitor for worsening of the condition/symptom	
Recommended appropriate referral if the condition worsens	
Educated appropriately how to take the recommended product(s): Dose, route, frequency, and duration	
Used open-ended questions	
Used patient friendly language	
Used appropriate non-verbal communication	
Overall Impression	
Assessed the patient and presented facts in a logical order	
Responses were understanding or empathetic	
Maintained control and direction of the counseling session	
Did <u>not</u> repeat information unnecessarily or ask unnecessary questions	

Comments
<i>What went well?</i>
<i>Areas for Improvements:</i>

Week 3	IPPE Topic Focus
Jan 29	Patient counseling on OTC-supervised by pharmacist (cough and cold) Course outcome 4 and 5

Exercise overview

The goal of this exercise is to practice counseling on an over-the-counter (OTC) medication commonly used to treat cough and cold symptoms. Your preceptor will supervise your counseling session, assess your technique and provide positive feedback.

On the day of this session, you will

- Ask your preceptor to identify a good question for you to answer about an OTC product
- Provide your preceptor the form below
- Interview the patient
- Discuss your performance with your preceptor

(Note: If the opportunity does not present itself to do this exercise with a real patient then ask for a volunteer from the pharmacy staff to be your patient)

	Below Expectations	Meets Expectations	Exceeds Expectations
1. Introduction

Week 4	IPPE Topic Focus
Feb 5	Drug Information- Prescription Course Outcome 1

Exercise overview

The goal of this exercise is to practice answering drug information questions. Through this assignment, you will apply the skills introduced in Drug Information and continue to develop your approach to responding to drug information requests.

One week prior to this session, you should notify your preceptor of this upcoming assignment and ask that throughout the course of the week, they take note of any meaningful drug information questions regarding prescription medications that have arisen. These may be questions they do not know the answer to or common questions that would benefit you.

On the date of the session, you will select one question and research the answer using the resources available at the site and electronically through the Manchester University Drug Information Center. The answer should be provided in a brief response specific to the intended audience (this may be a patient or a healthcare professional). You may use any type of drug information resource (e.g., tertiary, primary), but **must appropriately cite at least three resources**. You should review your results with your preceptor.

Week 4 Drug Information Exercise

Question:

Intended Audience:

Response:

References:

Week 5	IPPE Topic Focus
Feb 12	Patient interview-Health Literacy Course Outcome 2

Exercise overview

Pharmacists commonly use written and verbal communication to inform and verify understanding of instructions to patients. Pharmacists need to be alert for cues that a patient may have Limited Health Literacy (LHL). Pharmacists that can identify LHL can then work to meet their patients' needs which may lead to improved health outcomes. This exercise gives you the opportunity to practice using a screening tool to help identify patients with LHL.

On the date of this session

1. Ask a patient to participate.

A useful way to ask the patient is an explanation similar to this (after introducing yourself):

"We are asking our patients to help us learn how well patients can understand the medical information that doctors give them. Would you be willing to help us by looking at some health information and then answering a few questions about that information? Your answers will help us learn how to provide medical information in ways that patients will understand. It will only take about 3 minutes."

2. Hand the nutrition label to the patient.

The patient can and should retain the nutrition label throughout administration of the Newest Vital Sign. The patient can refer to the label as often as desired.

3. Start asking the 6 questions, one by one, giving the patient as much time as needed to refer to the nutrition label to answer the questions.

There is no maximum time allowed to answer the questions. The average time needed to complete all 6 questions is about 3 minutes. However, if a patient is still struggling with the first or second question after 2 or 3 minutes, the likelihood is that the patient has limited literacy and you can stop the assessment.

Ask the questions in sequence. Continue even if the patient gets the first few questions wrong. However, ***if question 5 is answered incorrectly, do not ask question 6.***

You can stop asking questions if a patient gets the first four correct. With four correct responses, the patient almost certainly has adequate literacy.

Do not prompt patients who are unable to answer a question. Prompting may jeopardize the accuracy of the test. Just say, “Well, then let’s go on to the next question.”

Do not show the score sheet to patients. If they ask to see it, tell them that “I can’t show it to you because it contains the answers, and showing you the answers spoils the whole point of asking you the questions.”

Do not tell patients if they have answered correctly or incorrectly. If patients ask, say something like: “I can’t show you the answers till you are finished, but for now you are doing fine. Now let’s go on to the next question.”

4. Score by giving 1 point for each correct answer (maximum 6 points)

Score of 0-1 suggests high likelihood (50% or more) of limited literacy.

Score of 2-3 indicates the possibility of limited literacy.

Score of 4-6 almost always indicates adequate literacy.

(Note: If the opportunity does not present itself to do this exercise with a real patient then ask for a volunteer from the pharmacy staff to be your patient)

Nutrition FactsServing Size 1/2 cupServings per container 4

Amount per serving

*Percentage Daily Values (DV) are based on a 2,000 calorie diet. Your daily values may be higher or lower depending on your calorie needs.

Ingredients: Cream, Skim Milk, Liquid Sugar, Water, Egg Yolks, Brown Sugar, Milkfat, Peanut Oil, Sugar, Butter, Salt, Carrageenan, Vanilla Extract.

READ TO PATIENT:

This information is on the back of a container of a pint of ice cream.

	Yes	No
<p>1. If you eat the entire container, how many calories will you eat?</p> <p><i>Answer: 1,000 is the only correct answer</i></p>		
<p>2. If you are allowed to eat 60 grams of carbohydrates as a snack, how much ice cream could you have?</p> <p><i>Answer: Any of the following is correct: 1 cup (or any amount up to 1 cup), half the container. Note: If patient answers "two servings," ask "How much ice cream would that be if you were to measure it into a bowl?"</i></p>		
<p>3. Your doctor advises you to reduce the amount of saturated fat in your diet. You usually have 42 g of saturated fat each day, which includes one serving of ice cream. If you stop eating ice cream, how many grams of saturated fat would you be consuming each day?</p> <p><i>Answer: 33 is the only correct answer</i></p>		
<p>4. If you usually eat 2,500 calories in a day, what percentage of your daily value of calories will you be eating if you eat one serving?</p> <p><i>Answer: 10% is the only correct answer</i></p>		
<p>READ TO PATIENT: Pretend that you are allergic to the following substances: penicillin, peanuts, latex gloves, and bee stings.</p> <p>5. Is it safe for you to eat this ice cream?</p> <p><i>Answer: No</i></p>		
<p>6. (Ask only if the patient responds "no" to question 5): Why not?</p> <p><i>Answer: Because it has peanut oil</i></p>		

Week 6	IPPE Topic Focus
Feb 19	Adverse Drug Reactions and Drug-Drug Interaction Course outcome 1 and 3

Exercise overview

The goal of this exercise is to develop skills and strategies for addressing electronic alerts that fire during prescription processing. Through this assignment, students will apply the skills introduced in Drug Information to commonly-encountered challenges for pharmacists.

At the beginning of this session, you should notify your preceptor of this assignment. You should ask the preceptor to take note of at least one commonly-encountered drug-drug interaction, contraindication, or adverse drug reaction alert that has fired during prescription processing. You will research the therapeutic issue using the resources available at the site and electronically through the Manchester University Drug Information Center. Based on the information obtained, you will recommend an appropriate course of action and how you would resolve this issue. You should review your results with your preceptor.

Week 6 Electronic Alerts exercise

Alert:

Background/Patient Information

Week 7	IPPE Topic Focus
Feb 26	Patient interview- Medication History Course outcome 2 and 4

Exercise overview

The goal of this exercise is to practice proper techniques of interviewing patients to obtain a complete medical history.

On the day of this session

With the help of your preceptor, identify a patient who is willing to spend a few minutes with you to complete a medical history for their records at the pharmacy. Please use the patient medical history form below.

Please make sure that all information is HIPAA protected

(Note: If the opportunity does not present itself to do this exercise with a real patient then ask for a volunteer from the pharmacy staff to be your patient)

Medical History Form

Patient Name (Use a made up name): _____

Gender: Male Female

Date of Birth (Does not need to be the exact DOB; just close to the age): _____

Past Medical History

Family History

Social History

Occupation: _____

Caffeine Yes No Amount _____ Source _____

Tobacco Yes No Quit Packs per week _____ # Years _____

Interested in quitting? Yes No

Alcohol Yes No Amount _____

Any recreational drugs or steroids used? Yes No

If yes, please list drugs, amount, and how long you have used these.

Diet and Exercise?

Source of Medications

- Local Pharmacy Internet
 Samples Foreign (Canada/Mexico)
 Mail Order Other: _____

Any Cost Issues? Yes No

If yes, please describe

Allergies

Name of Substance (drug or food)	Type of Reaction
<input type="checkbox"/> Check this box if no known drug allergies	

For female patients: Are you currently pregnant? Yes No
 Are you considering becoming pregnant? Yes No
 Are you currently breastfeeding? Yes No

Current Medications

Medications	Strength	Directions	When and how you use this medication	Prescribed By
<input type="checkbox"/> Check this box if none				

Week 8	IPPE Topic Focus
March 5	Home Diagnostics (Home Pregnancy Tests) Course Outcome 6

Exercise overview

The goal of this exercise is to familiarize you with the available products for Home Pregnancy testing.

On the day of this session, you should scan the OTC aisles for Home Pregnancy Test kits.

Choose one product to recommend to your patient and answer the questions below

How many Home Pregnancy Test Kits are on the shelves?

Which product did you choose?

Why did you choose this product? *(Please justify your answers)*

Summarize “proper use” instructions as you would for a patient

Week 9	IPPE Topic Focus
March 12	Review Article summary about a disease Course Outcome 6

Exercise Overview

The goal of this exercise is to practice searching for articles using PubMed® and to improve skills in interpreting and condensing scientific information. Through this exercise, you will demonstrate skills developed in Drug Information.

One week prior to this session, you should verify whether their practice site has electronic access to PubMed via the Internet. If the site does not have Internet access, you should complete Part 1 of this exercise at home during the week prior to the session. If the site does have Internet access, you may complete Part 1 of the exercise during the week prior to or the day of the session.

Part 1: You should select a disease state that is commonly encountered in your practice setting. You are encouraged to work with your preceptor in order to pick a topic that is timely and interesting for them and their staff. Students will then conduct a search of PubMed in order to locate a review article or clinical practice guideline relevant to that disease state.

Part 2: You will describe the information obtained in the article in a 250 to 500 word summary (may present in narrative or bulleted format). You should review your results with your preceptor and other interested pharmacy staff.

Week 9 PubMed search exercise

Summary

Week 10	IPPE Topic Focus
March 26	Smoking cessation product focus Course Outcome 3 and 5

Exercise Overview

The goal of this exercise to familiarize you with available nicotine replacement products intended to help people quit smoking. That includes both OTC and prescription medication.

On the day of this session you will

Complete the chart below regarding what types of nicotine replacement therapies are available, both over the counter and with a prescription, at your pharmacy. The item in the first line is intended to serve as an example.

Product Trade Name	Product Generic Name	Available strengths	Instructions for use	Counseling Points	Approximate Cost/Day
Nicorette	Nicotine gum	2mg (<_/day) 4mg (≥_/day)	Weeks 1-6: Weeks 7-9: Weeks 10-12:	- Chew each piece slowly several times, - Stop chewing at first sign of slight tingling - “Park” gum between cheek and gum	Brand: Generic:

Week 11	IPPE Topic Focus
April 2	Patient Counseling (Smoking Cessation) Course outcome 4 and 5

Exercise overview

The goal of this exercise is to practice counseling on smoking cessation medication. Your preceptor will supervise your counseling session, assess your technique and provide positive feedback.

On the day of this session, you will

- Ask your preceptor to identify a good counseling opportunity
- Provide your preceptor the form below
- Interview the patient
- Discuss your performance with your preceptor

(Note: If the opportunity does not present itself to do this exercise with a real patient then ask for a volunteer from the pharmacy staff to be your patient)

	Below Expectations	Meets Expectations	Exceeds Expectations
1. Introduction			
Introduced self and greeted the patient			
Asked appropriate initial question to determine patient's problem			
2. Gather Patient Data			
Gathered PATIENT-related data as needed to assess the problem			
Gathered PROBLEM-related data as needed to assess the problem			
3. Assess and Evaluate Current Therapy			
<i>If</i> the patient was CURRENTLY using drug or nondrug therapy for the problem, the student appropriately assessed and recommended continuation, change, or discontinuation of that therapy			
Gave justification for the recommendation			
4. Select & Recommend			
Selected and recommended appropriate drug therapy			
Selected and recommended appropriate non-drug therapy			
Appropriately referred the patient or recommends "no therapy needed"			
The student gave justification for the plan			

5. Monitor			
Counseled the patient about how to monitor for efficacy and safety of the recommended treatment			
Counseled the patient about how to monitor for worsening of the condition/symptom			
Recommended appropriate referral if the condition worsens			
6. Educate			
Educated appropriately how to use the recommended product(s): Dose, route, frequency, and duration			
7. Communication			
Used open-ended questions.			
Used appropriate verbal communication skills.			
Used appropriate non-verbal communication			
Used patient friendly language.			
8. Overall Impression			
Assessed the patient and presented facts in a logical order.

Week 12	IPPE Topic Focus
April 9	Medication safety Course outcome 1

Exercise Overview

The goal of this exercise is to apply principles of medication safety to a patient care setting. This exercise builds on content learned in Introduction to Pharmacy II.

At the beginning of this session, you should notify your preceptor of the assignment. You will ask your preceptor to recall at least one near-miss medication error that recently occurred in the pharmacy, preferably during the same day. Examples of near miss errors include: confusing handwriting that was clarified, potential drug errors caught prior to dispensing, potential patient errors identified prior to prescription processing, etc. For the identified error, you should address the listed items and review the worksheet with preceptor.

Week 12 Medication Safety Exercise
Scenario Background
What system issues allowed the error to happen?

How was the error identified?

How else could the error have been prevented?

Where should the error be reported and why

Week 13	IPPE Topic Focus
April 16	Drug Diversion Course outcome 1 and 2

Exercise Overview

The goal of this exercise is to apply principles of drug diversion prevention to a patient care setting. This exercise builds on content learned in Introduction to Pharmacy II.

At the beginning of this session, you should notify your preceptor of the assignment. You will ask your preceptor to recall a situation of potential drug diversion that they encountered (it could be on the part of a patient or an employee). You will then respond to the following items and discuss the worksheet with your preceptor.

Drug Diversion Exercise

Describe the situation

What pharmacy resources could you use to address the situation

What external resources could you use to address the situation

How would you handle the situation if you were the pharmacist

How did your preceptor handle the situation

Week 14	IPPE Topic Focus
April 23	Interventions Course outcome 1 and 3

Exercise Overview

Please document examples of four interventions (e.g. Drug-drug interaction, allergy) that prevented a medication error from occurring. Give an overview of what happened, how was it detected and what follow up was provided.

	What happened	How was it detected	Follow up

Week 15	IPPE Topic Focus
April 30	Student's topic of choice Course outcome 6

Please write a one page reflection on your topic of choice and what you have learned
