

Mission

Utilizing experiential learning techniques, exceptional faculty seek to provide students with a premier education in the core theories of psychology, while also developing their skills in critical thinking, research methods, and statistical techniques.

Psychology majors will be well prepared for successful futures:

- The majority enter graduate studies in areas such as clinical/counseling, cognitive neuroscience, educational, and industrial-organizational psychology.
- Many bachelor-level graduates work in a wide array of exciting fields including business, education, human resources, law enforcement, mental health, and social services.

Goals
